

Brightpath - Getting Started

This guide takes you from an empty account to a working workspace with your team collaborating. Follow the steps in order.

1. Create your workspace

From the Brightpath home screen, choose Create workspace. Give it a name your team will recognize - most use their company or product name. You become the workspace owner automatically.

2. Invite your team

Open the workspace and go to Settings -> Members. Click Invite people, then enter the email addresses you want to add. Pick a role for each invite - Admin, Member, or Viewer - and send the invites. Invited people get an email with a link; once they accept, they appear in the member list.

- Viewers can read boards and docs but cannot edit them.
- If your plan includes SSO, members can also join via your identity provider.
- Owners can set a default role so everyone from your domain starts correctly.

3. Set up your first board

Choose New board, pick a Kanban or list layout, and add a few columns that match how your team works (for example, To do, In progress, Done). Create tasks, assign owners, and set due dates.

4. Connect integrations

Under Settings -> Integrations you can connect Slack for notifications, Google Drive for file attachments, and your calendar for due-date reminders. Each integration asks for permission only to the scopes it needs.

5. Go mobile

Install the Brightpath mobile app and sign in with the same account. Your boards, docs, and notifications sync automatically so you can update work from anywhere.
