

# Brightpath - Product Overview

Brightpath is the project workspace where teams plan, track, and ship work together. This overview explains what Brightpath does and how its modules fit together.

## Why teams choose Brightpath

Brightpath replaces a sprawl of disconnected tools with one workspace for planning and execution. Work lives in boards, the context lives in docs, and progress is visible to everyone without status meetings.

## Core modules

- Workspaces - the top-level container for a team or project.
- Boards - Kanban and list views for tasks, with owners and due dates.
- Docs - collaborative pages linked to the work they describe.
- Automations - rules that move, assign, and notify as work changes.
- Insights - dashboards for velocity, workload, and blockers.

## Security and trust

Brightpath is built for business data. Every workspace is isolated, access is role-based, and enterprise plans add SSO, audit logs, and data-export controls. See the Brightpath FAQ for the full list of roles.

## Getting started

Most teams are up and running in an afternoon: create a workspace, invite your team, set up a board, and connect the integrations you already use. The Brightpath Getting Started guide walks through each step.

## Plans

Brightpath offers Free, Team, Business, and Enterprise plans. Details and per-seat pricing are in the Brightpath Pricing & Plans guide.
